

PRINT PICTURES AND WORDS WITH THE ENHANCED C-INTERFACE

MORE FEATURES

Print with any Commodore 64 compatible printer.

Print color graphics with the Okimate 10 printer (using Commodore Plug N Print). Handles pictures created in HGR or HGR2 graphics modes.

Print B&W graphics with Commodore 64 compatible printers.

Print several times faster than Adam printer by using a dot matrix type printer.

Print quieter than Adam printer by using a dot matrix or thermal type.

Use fan-fold paper without fear of jamming or slipping. Most printers have reliable pin-in-hole paper feed.

ADVANTAGES

1 year parts and labor warranty. Works with minimum Adam system - no disk, CP/M, or other addition required.

All packages include C-Interface board, manual, and software on digital data pack.

Packages including printer require no additional equipment (cable, mounting hardware, etc.) Centronics Port package includes cable: it requires only a printer with a Centronics Parallel Interface.

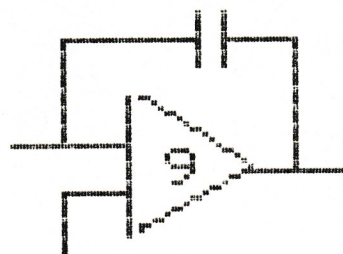

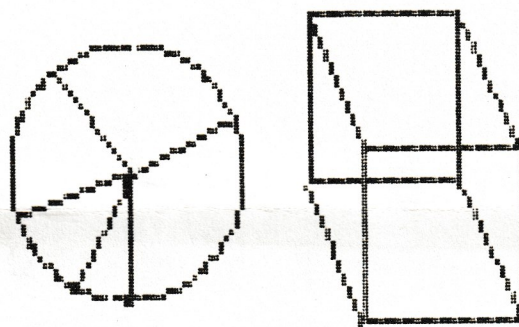

Commodore compatible printers generally include the cable.

Fits in Adam's expansion slot 1. Supports underline, subscripts, superscript in Smartwriter.

NEW FEATURES

Print from Smartbasic using the built in commands (LIST, PRINT, PR#2, ETC.) No printing routines need be added to your program. Programs may be listed from memory immediately, without first storing them.

Print color or B&W pictures created with the powerful PaintMaster graphics design software from Strategic Software (424 E. John St., Lindenhurst, NY 11757). This drawing program uses your game paddle as a paintbrush, a pointer to where simple shapes can be created, and a program controller using icons instead of menus. It will also save and load pictures to tape/disk. Graphics on this flyer are from PaintMaster.

PRINTER COMPARISON CHART
